

BITO Offers New Spartacus Manager Production Laser Cutter Software

Tuesday, Jan. 25, 2011

Increase your productivity and capabilities with the brand-new [Spartacus Manager](#), a new tool that can be added to this galvanometric laser cutter. With the Manager, which consists of a flat-panel mini PC computer and software, you can now queue up multiple jobs to the cutter so that production can be continuous. Without the Manager, a job must completely finish before you begin the process of preparing and sending the next job.

With the natural speed of a galvanometric laser, jobs can be processed at a significantly enhanced speed that easily can keep up with a multihead embroidery machine. Multiple operators can send designs to the machine, pick them up when done, and the next job is started automatically.

The Spartacus is ideal for cutting appliqués and creating new looks such as distressed, reverse, and multilayer. It can be used to cut out emblems or printed pieces. It also can do hard goods such as paper, textiles, anodized aluminum, non-toxic polymers, Plexiglas®, and leather.

The Spartacus Manager works hand in hand with Focuscut III software, which comes with the laser cutter. Users can change a variety of parameters including laser power and speed to obtain optimum performance. The laser can be adjusted for products of varying thicknesses by adjusting the cutting bed height.

BITO specializes in laser-cutting equipment and digitizing software for the decorated apparel industry. For more information, contact BITO at 866-BITO-USA (866-248-6872); [e-mail: bito@bitousa.com](mailto:bito@bitousa.com) or visit the Web site at www.bitousa.com.
